

#### ABSTRACT OF LABORATORY AND CLINICAL STUDIES

Yin-Care is a combination of 14 highly concentrated herbs treasured for centuries in China for their antipathogenic properties. It has been used by millions of people over the last twenty years with remarkable effectiveness.

Yin-Care has been the subject of more than one hundred scientific studies carried out in China's medical universities and hospitals. The following abstracts have been selected from a collection of 37 research papers first published in 1992 under the title:  
***Yin-Care Symposium on Dermatology, Obstetrics and Gynecology.  
Chengdu. Peoples Republic of China.***

## **TREATING NON-GONOCOCCAL URETHRITIS**

The main causes of non-gonococcal urethritis are chlamydia and mycoplasma. Other common bacterial pathogens include staphylococcus aureus, bacillus coli, and bacillus pyocyaneus.

In this Kunming Medical University experiment, only individuals testing positive to chlamydia and/or mycoplasma were studied. Common symptoms included urethral irritation, infected secretions, and a sensation of congestion at the uterine neck.

In a treatment group of 40 cases (7 males and 33 females) the duration of infection ranged from 1 month to 5 years. The control group was comprised of 21 cases (5 males and 16 females) with an infection duration ranging from 3 months to 2 years.

Patients in the treatment group used a 10% solution of Yin-Care as a wash once every evening for 14 days in succession. Patients in the control group were treated with tetracycline.

Treatment results and lab examination in the Yin-Care group showed 39 cases fully recovered and 1 case ineffective for a 97% cure rate. Lab examination of the tetracycline group showed 14 cases negative and 7 cases positive for a 67% cure rate.

This study showed that Yin-Care's traditional functions of clearing heat and toxin, draining dampness, expelling wind and reducing inflammation in the treatment of non-gonococcal urethritis achieved a high degree of effectiveness, exceeding even that of antibiotic therapy.
